European Space Astronomy Center (ESAC), Madrid, Spain

24 / 25 September 2018

Development and Present Status of PocketQube in Nepal [Nepal-PQ1]

PRAJAPATI Rakesh Chandra
Founder/CEO ORION Space

Rakesh Chandra PRAJAPATI

10 years of experience in R&D (Research and Development), SI (System Integration), V&V (Verification and Validation), AIT (Assemble, Integrate, and Testing) in Biomedical and Space Engineering.

- Founder/CEO of **ORION Space**
- Masters in Electronics and Space Technology from **EPFL**, Switzerland (2007 - 2010)
- SwissCube – **CubeSat** Launched in 2009
- Interest in **Physics and Geometry**

SwissCube CubeSat Launch
23-09-2009, EPFL

SwissCube- CubeSat, EPFL

Pico/Nano-Satellites

- Pico/Nano-Satellites
 - *CanSat (model of satellite) in 1998*
 - *CubeSat (10cm x 10cm x 10cm, 1kg) in 1999*
 - *PocketQube (5cm x 5cm x 5cm, 250g) in 2009*

Group name	Mass (kg)
Large satellite	>1000
Medium satellite	500 to 1000
Mini satellite	100 to 500
Micro satellite	10 to 100
Nano satellite	1 to 10
Pico satellite	0.1 to 1
Femto satellite	<0.1

Pico-Satellite: PocketQube

- PocketQube
 - 1P is 5cm x 5cm x 5cm Cube Satellite
 - 250 grams
- Advantages of Pico/Nano-Sat
 - Affordable for University Project
 - Private Company Project
 - Capacity Building

EduQube Kit by PicoSat Systems

First PocketQubes Launched in 2013

Let's Start with
Small

Started with CanSat Project

a) OBC PCB

b) GPS PCB

c) Payload PCB

d) EPS PCB

e) COM PCB

f) CanSat 3D Model

(Stacked)

Stackable PCBs of CanSat Sub-Systems

Why PocketQube?

- What NEXT after CanSat?
- Potential Users
 - Education
 - Research
 - Commercial
- Application
 - Education and Training
 - Science
- Early Career Development
 - Next generation engineers

- *EPS: Electrical Power System*
- *OBC: On-Board Computer*
- *ADCS: Attitude Determination and Control System*
- *COM: Communication System*

Block-Diagram of Nepal-PQ1

Mission and Payload Selection

Selected a **mission** which does not require any pointing mechanism.

Find a **payload** which consumes less power, fits in a small volume, and does not require pointing mechanism.

Payload

Ultra-low power (3.3 V, 25 μ A) and small size (31.5mm x 16mm x 7mm) radiation sensor 'BG51-SM'.

The sensor sends CPS (count per second) to the OBC.

- We decided to use the ATmega328p 3.3V chip for OnBoard Computer (OBC) system, which we had experience from the earlier **CanSat project**.
- We decided to use RFM26W 20dBm (100mW) for COM, which is based on Si4463

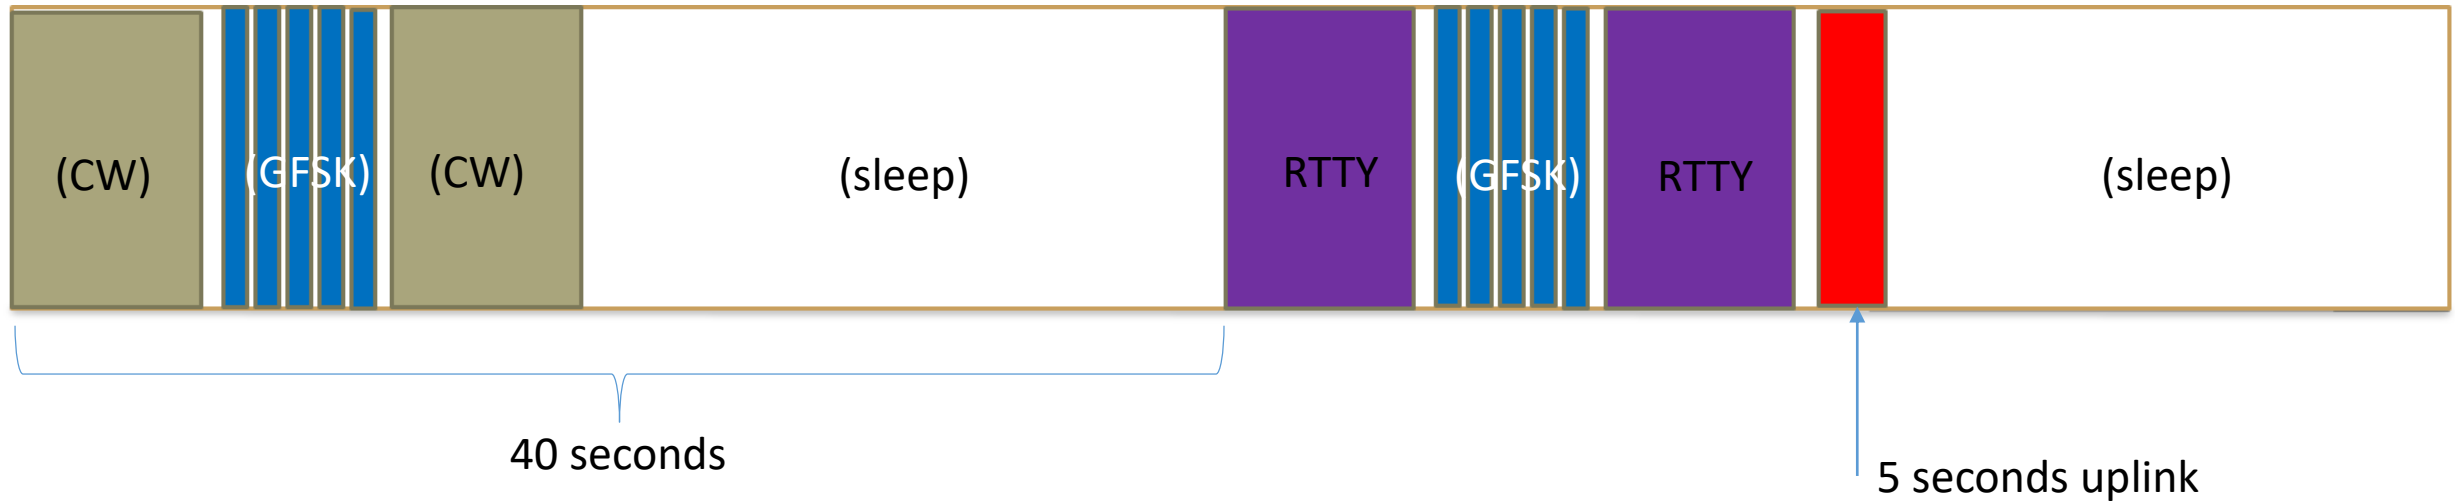

1st Iteration

2nd Iteration

3rd Iteration
With external
watchdog

On-Board Computer (OBC) & COM Board

RTTY FSK : 50 Baud, ID + Housekeeping (All Payload)

CW Morse : 20 WPM, ID + Temp + Current + Voltage

GFSK Downlink: 1200bps, RFM26 packet structure with payload

GFSK Uplink: 1200 bps, RFM26 packet structure with commands

Communication Mode and
Time Division Multiplexing

Electrical Power Supply

SPV1040

High efficiency solar battery charger with embedded MPPT

STEVAL-ISV006V2

STEVAL-ISV012V1

PocketQube Cost & Time

- **Hardware Development by ORION Space**
 - Need support for Launch cost (25k USD)
- **Two engineers and Internship students**
 - Salary 200 USD per month for one engineer
- **Our Science Mission**
 - Store and Forward sensor data
 - Measure the Space radiation
- **Our Mission Time**
 - To launch within 2 years

Render of Nepal-PQ1

COST ESTIMATION

Hardware Development	10k	USD
Assembly, Integration, and Test	5k	USD
Thermal Vacuum and Vibration Test	5k	USD
Ground Station Building	5k	USD
Launching PocketQube to LEO	25k	USD
Total	50k	USD

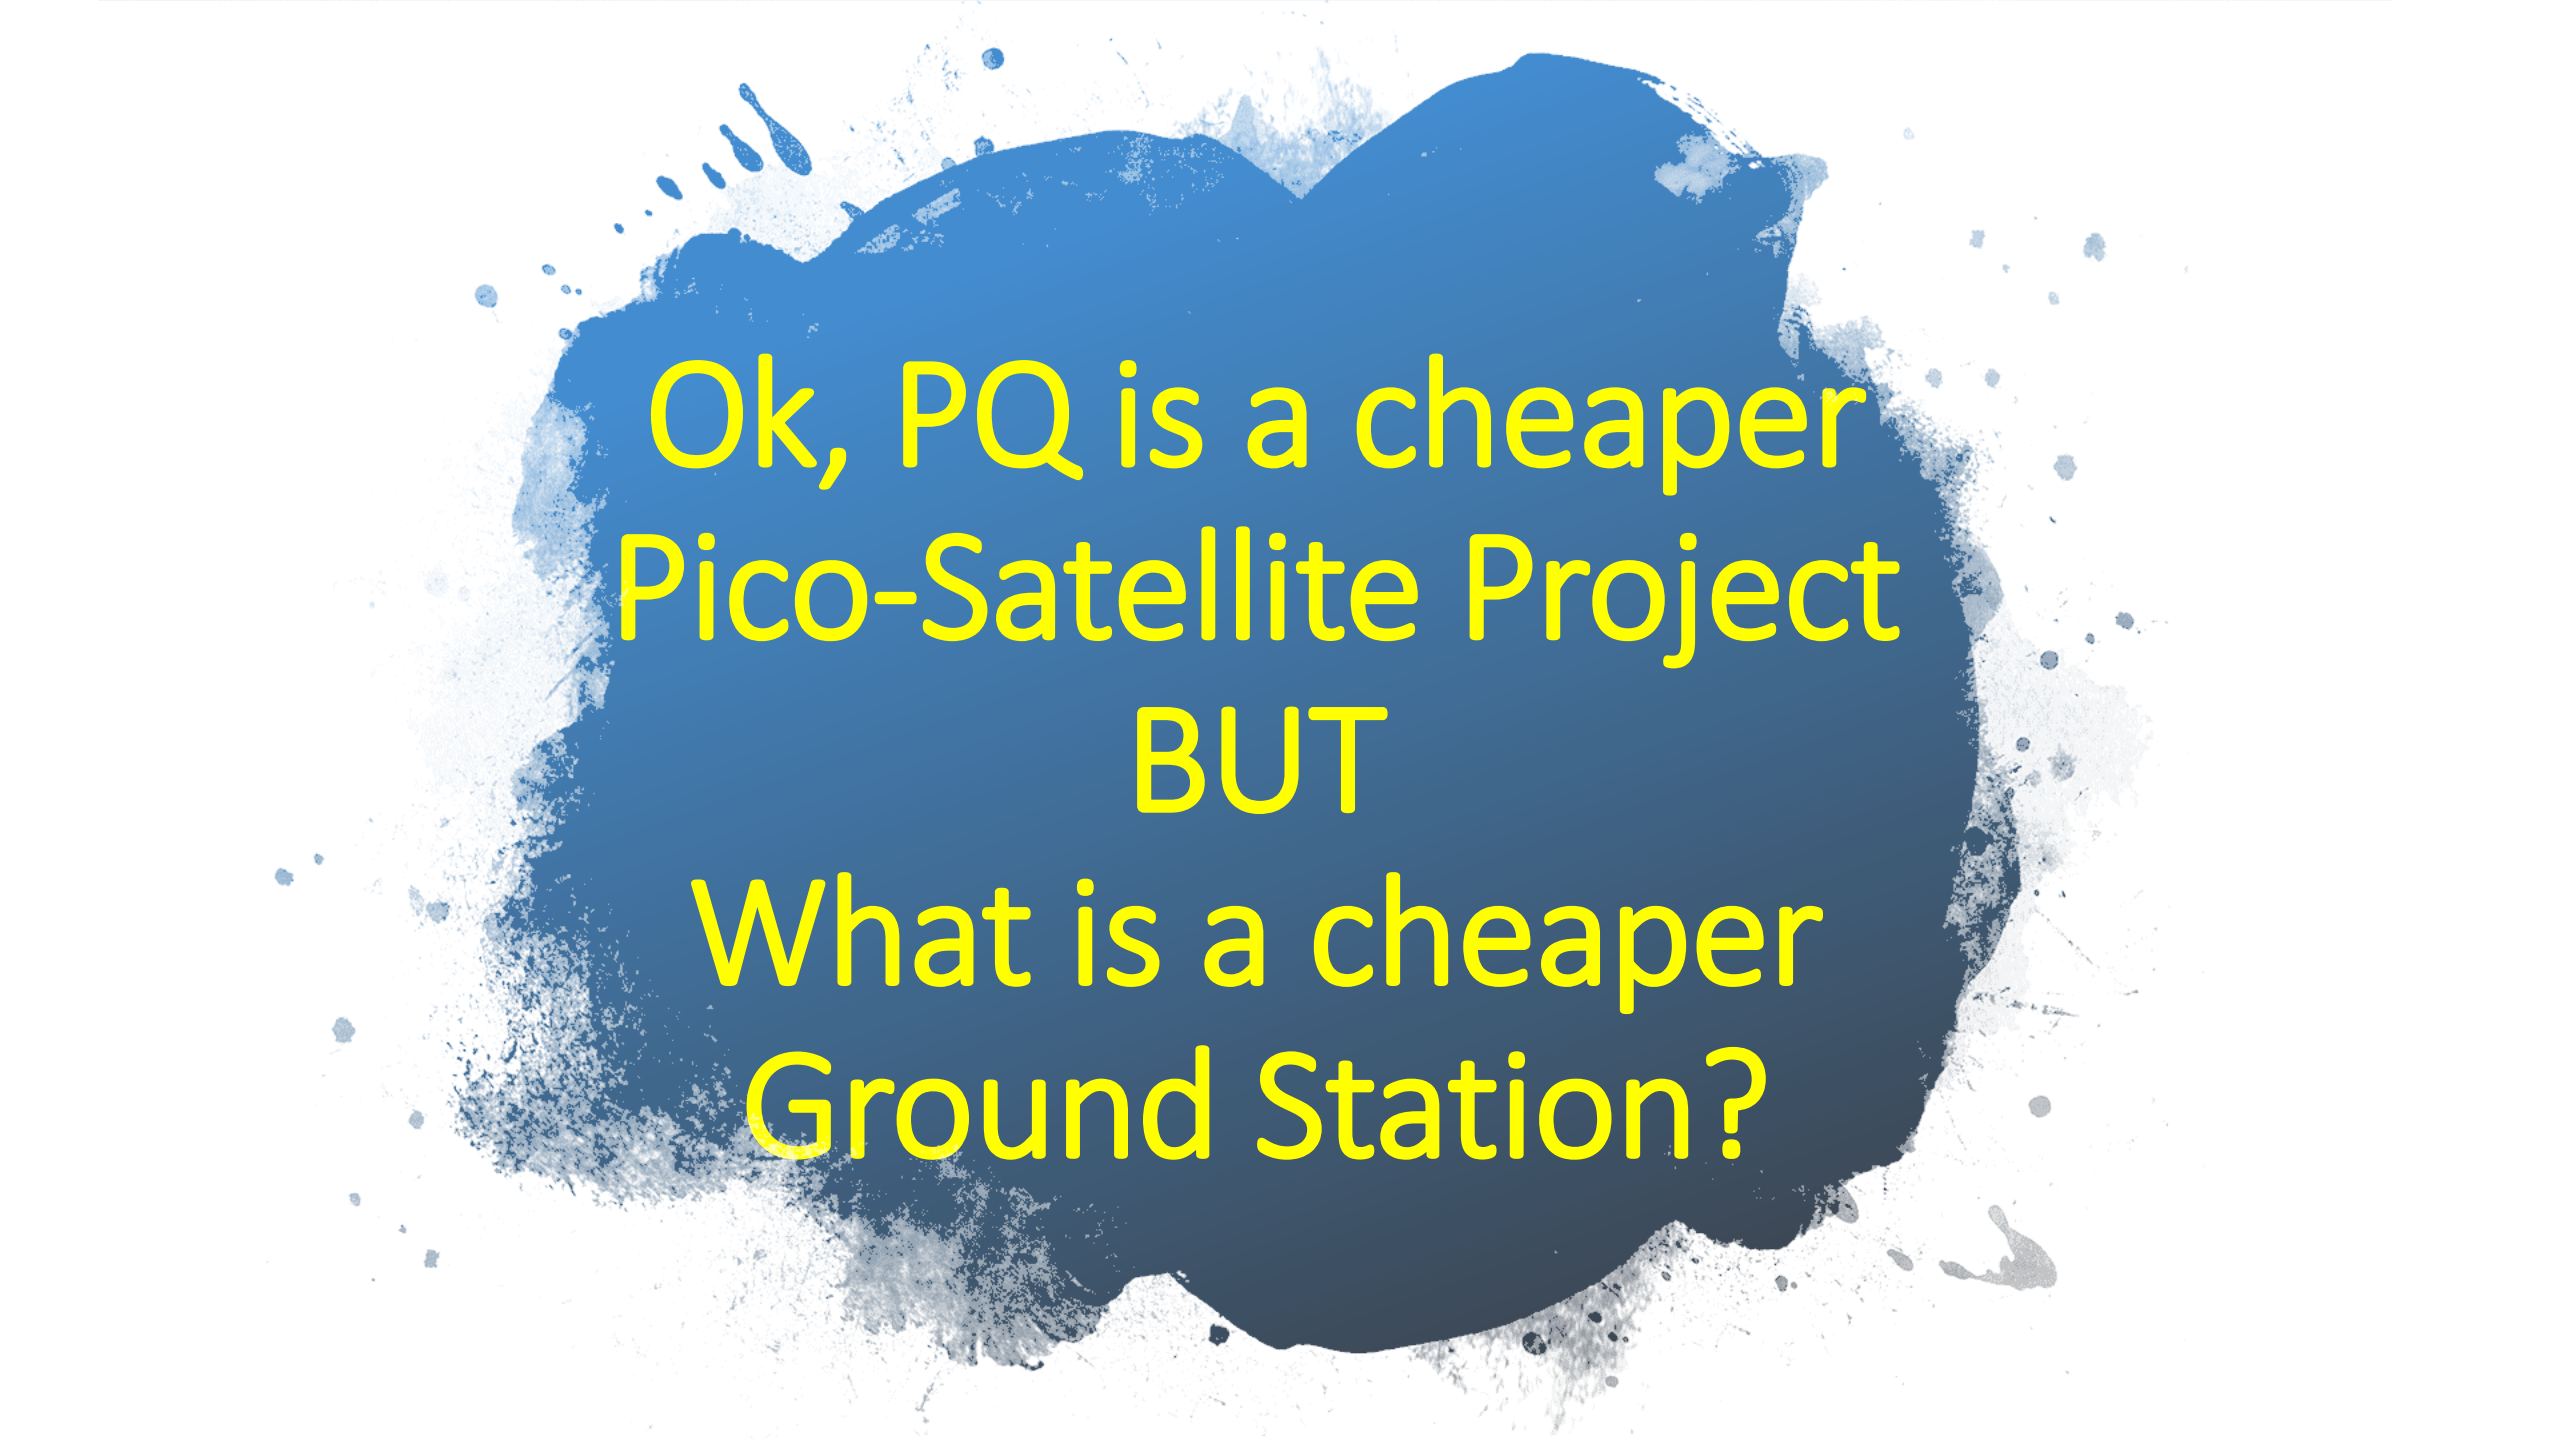

Challenge of building PocketQube

- Limited **volume** for payload
 - 1P = 5cm X 5cm X 5cm
- Limited **power** for operation
 - 250mW
- Start with teaching and preparing the man-power, and then start building it!

Prototype of Nepal-PQ1

Ok, PQ is a cheaper
Pico-Satellite Project
BUT
What is a cheaper
Ground Station?
